# 1. CUSTOMER SEGMENT(S)

The main customers for this product is from Industrial plants. This includes both small scale and large scale manufacturing plants. This Product can be used in any manufacturing/industrial plant that involves a fire risk, Hazardous gas risks.

## 6. CUSTOMER CONSTRAINTS

False alarms.

Cost of available devices.

Unsatisfactory user interface.

Inaccurate measuring devices.

RC

Indoor positioning systems.

Bluetooth based Beacon systems for data transfer.

Fixed sensor based gas detection systems.

### 2. JOBS-TO-BE-DONE / PROBLEMS

The problem exists because of lack of customized products.

9. PROBLEM ROOT CAUSE

The cost of the existing products is high, but the satisfactory user interface is lacking.

Lack of flexibility in the available products, that is, the devices can only measure a predefined set of gases that might not be needed in a given industrial plant.

## 7. BEHAVIOUR

What does your customer do to address the problem and get the job

Install gas detection sensors with displays and alarms.

Buy necessary devices from third party vendors and use their own teams to build and maintain the monitoring systems.

Select appropriate sensors for necessary gas detection.

Select necessary gateways for communications.

Find additional features that can be added into the system.

The Customers here are triggered by
